

Ambient

Blankets a space and provides the base or minimum level of illumination. It is important when establishing an impression or creating a mood. It is the general light in a space.

Task

Provides additional light in areas that require visual tasks. E.g. desktop or office cubical. Circulation space around the task lighting would be ambient.

Accent

Provides a visual interest highlighting the architecture or calling attention to important elements. It is a directional light used to emphasise or draw attention to an object.

Sources and Position

- A lack of highlighting = dull flat effect
- Shade suggestive of notions of safety, conformity, boredom or inertia
- Use of daylighting Illogical to use when you need to control the environment/for editing purposes

3 POINT LIGHTING

Back Light/Hair Light

- lights an actor or object from behind
- placed higher than the object it is lighting
- separates the actor or object from the background
- when placed at an angle it's called a "kicker"

Fill light

- cancels out the shadows created by the key light, doesn't create it's own shadows
- less powerful than the key light
- placed opposite the key light

Key Light

- primary light source of the scene
- the most intense and direct light source
- illuminates the subject or actor

Atmosphere, time, place, character and even plot development.

Aggressive - warm

The yellows, oranges and reds.

- Towards the eye spatially
- Louder than passive colours

Passive - cool

The greens, blues and violets.

- Recede from the eye

- Quieter than aggressive colours.

Soft/diffuse light allows textures and tones to have more visibility

Richard Kelly's Three Forms of Lightplay

- Ambient luminescence, focal glow and play of brilliants

A gobo = stencil or template put inside or in front of a light source.

Cucolorises (cookie) used to shape and direct light in a specific way - further away from light source.
